- Always check that the gun is unloaded when removed from storage or received from another person.
 - Always load the magazine with appropriate .177 – 4,5 mm Caliber Steel BBs. The use of incorrect projectiles may not be safe and steel BBs should not be reused.
 - Put always the Safety "ON" when you install the magazine (loaded or not) in the gun.
 - Do not load your gun if you are not ready to shoot.
 - Keep your finger off the trigger until you are ready to shoot.
 - If you decide to stop shooting, remove immediately the magazine and shoot in a safe direction if one BB is still into the chamber.
 - Always handle the gun as though it were loaded and ready to shoot.
 - Always aim in a safe direction.
 - Do not aim or shoot at other people or domestic animal.
 - Safety goggles and mouth protection MUST be worn when operating this AIR-GUN gun by the user and any person within range. For some persons, it will be necessary to use safety goggles over their normal optical reading glasses.
 - Be careful to avoid rebounding or ricochets and always aim at a safe target. Do not shoot at water.
 - CAUTION — Your backstop should be inspected for wear before and after each use. Discontinue use if the backstop surface shows signs of failure. Since backstop surfaces eventually fail, always place the backstop in a location that will be safe should the backstop fail. Discontinue the use of a backstop if the projectile rebounds or ricochets.
 - Never use alcoholic beverages or drugs before or during shooting sessions.
 - Always store your gun unloaded, with safety "ON", magazine empty and removed.
 - Always store your ammunitions and CO₂ cylinders separately from the gun.
 - Keep out of reach of children and non –expert shooters.
 - Inspection and maintenance of this gun are recommended periodically.
 - Modification of the gun mechanism may cause a gun to malfunction and that tampering with a gun may make it unsafe to use. Any change in the performance, such as lowered trigger force and shortened trigger travel, indicates possible wear and that such gun should be inspected, replaced, or properly repaired. Repairs should only be made by qualified personnel.
 - Check any gun that has been dropped to ensure that its function has not been affected.
1. Use CO₂ Cylinders 12 gram type.
 2. Store your CO₂ cylinders at normal temperatures 50 – 70°F (10 à 20°C). CO₂ Cylinders may explode at temperatures above 160°F (71°C).
 3. High temperatures can increase strong pressure in the cylinder and this may prevent the gun from shooting and may damage the gun. Maximum operating or storage temperature of the gun and cylinders is about 105°F (40°C).
 4. Fast shooting will decrease temperatures in the Gun and CO₂ gas. This will result in low power. Especially, this can happen when shooting by low temperatures, in cold weather. To avoid this event and to permit the increasing of the pressure , take more time between shots.
 5. During fast shooting, because the power decreases, the accuracy can be affected. It will also affect the number of shots per cylinder.
 6. Take care to not shoot with a low CO₂ pressure, the BBs can stay in the barrel.
 7. Always remove the CO₂ Cylinder from the gun.

INSTRUCTIONS MANUAL - MANUEL D'UTILISATION - MANUAL DEL USARIO

CO2 POWERED AIRGUN SEMI AUTOMATIC

- Insert the cartridge and first, take care to perfectly center it at the top.

- Screw the bottom of the compartment. When pressure starts increasing in the compartment (expansion of the CO2 in the compartment can be heard), finishing screwing rapidly. Very important: do not tighten excessively, it could permanently damage the O'rings.

- To remove the magazine, press the release (1) located on the left side of the grip. Slide magazine out.

- Pull down the spring with the release. Fill the magazine with the appropriate 4,5 mm Steel BBs as shown. Maximum capacity is 20 BBs.

- Push and lock grip in place.

- Slide the magazine in the grip until it is locked (a distinct click will be heard).

- Slide the grip backward to open the cartridge compartment.

- Unscrew this button to introduce easily the cartridge.

- Pull the trigger

- After emptying the magazine, press and at the same time push the safety mechanism back into the locked position.
