The Chrony LED Lamp comes with the following parts:

- Main Power Jack
- Power Connection Jack
- Wire-Ends (4pcs)
- FTP Power Connection Cable (1pc)
- Cigarette Lighter Male Plug (1pc)
- Car Cigarette Lighter Socket of the vehicle

There are 3 ways to power the Chrony LED Lamp (C.L.L.):

Option A: SET UP The C.L.L. using a 120V/220V AC Adapter

Step 1: Insert 16" wire-end (d) into the screw holes that locate on top of the photo-ensured housing of your Chrony as Figure 1.

Step 2: Position the Front and Rear C.L.L. so that you can read the labels “Front C.L.L. & Rear C.L.L.” Install the Front C.L.L. (a) into the front Wire-Ends of the Chrony and install the Rear C.L.L. (b) into the rear Wire-Ends of the Chrony. Make sure the C.L.L. labels are facing towards the front so that the Main Power Jack will be on the left side and Power Connection Jacks will be on the right side (see Fig. 1).

Step 3: Plug FTP Power Connection Cable (c) to each front and rear Power Connection Jacks of the C.L.L.

Option B: SET UP The C.L.L. using a Battery Power Station

The 12V DC Battery comes charged from the factory; it is necessary to recharge it before use. It is important to learn and understand all features and parts that come with the Battery Power before use.

Option C: SET UP The C.L.L. using a Car Cigarette Lighter Plug

1. Follow Step 1 to Step 3 in the “Option A”.
2. Simply plug the cigarette lighter male plug of FTP cord with harness connector (Fig. 2) into the 12V DC female socket of the Battery (Fig. 2), the other end (harness connector) into the Power Jack of the C.L.L.
3. When the Light Lights the slot on both C.L.L., the unit is NOT READY to use. If any C.L.L. is turned on but not light along the slot, the unit is NOT READY to use, and make sure a bad connection or power status (low battery, input Voltage is lower than 12V DC, or the Current is lower than 30mA). In this case, (1) Check all the wire connections making sure all jack plugs are all the way in. (2) The Battery Power Station needs to be recharged.

STORING AND PRECAUTIONS

- NEVER open the Chrony Chronograph and the Chrony LED Lamp under BAKING conditions.
- NEVER use an AC Adapter that produces more or less than 120VDC output.
- DO NOT reverse the front and rear C.L.L.
- DO NOT store the unit at temperature less than 14°F (-10°C) or higher than 120°F (49°C).
- If your unit has been stored at DC NOT TOUCH any metal part of TURK OFF the Power Source immediately.
- For Battery, refer to the Battery Power Station Manual for Storing and Precautions.
